

needle-free mesotherapy infusion

You've heard of Botox but you're reluctant to do it. Plus there's the cost to consider. What if we told you there was a needle free alternative? Needle-free Mesotherapy Infusion. It may seem like a mouthful to pronounce but the method really works well on your skin!

What is needle-free mesotherapy infusion?

Mesotherapy is treatment designed to stimulate the mesoderm or middle layer of the skin. Developed in France in the 1950's, naturopathic solutions are injected into the mesoderm to stimulate skin rejuvenation. With technology, we can infuse these natural solutions into the mesoderm without the needles.

Infusion Electro-mesotherapy is the pain-free, needle-free alternative to traditional mesotherapy and provides safe and effective non-invasive trans-dermal delivery of therapeutic solutions. Unlike a serum that nourishes the outer layers of your skin; the mesotherapy infusion goes deeper and nourishes your skin not only from the outside but also from the inside by opening up a microscopic channel in your skin to achieve the penetration needed to get beneath the outer layers. The natural solutions contain vitamins, minerals, amino acids and antioxidants that rejuvenate, promote collagen and elastin production, improve hydration and increase skin metabolism. By directly nourishing the cells with vital nutrients, individual's look more youthful and the solutions stimulate the immune system facilitating rejuvenation that continues post treatment as part of the body's natural response.

Excellent for:

- Anti-aging and wrinkle reduction
- Collagen induction and regeneration
- Skin hydration, firming and toning
- Needle-free trans dermal delivery of injection grade natural solutions
- Non-invasive and pain-free with immediate visible results

Will it hurt?

We're telling it like it is: this is a pain-free safe alternative. No downtime.

You can get the treatment done during your lunch hour and then head back to work. Your skin will be rejuvenated as the solutions contain vitamins, minerals, amino acids

and anti-oxidants that will promote the production of collagen and elastin. Be prepared to receive flattering compliments on your skin's youthful glowing appearance upon your return to work.

You may feel a prickly sensation during the treatment which will actually feel like your skin is being massaged.

How often should I have the treatment?

Although you will definitely see visible results after your first treatment, the effects of mesotherapy infusion are cumulative and a series of 4-6 treatments spaced two weeks apart is recommended to start with maintenance treatments every 6-8 weeks.
