

The **Pristine diamond microdermabrasion system** combines the precision of diamonds with the most powerful motor on the market to create the optimal microdermabrasion peel.

Precise suction control, positioning and pressure ensure peel uniformity at consistent treatment depths. The dual actions of exfoliation and suction stimulate the growth of new cells and encourage the regeneration of collagen and elastin for firmer, healthier looking skin.

The Pristine Microdermabrasion Diamond Peel:

- **Skin Rejuvenation**
- **Acne & Trauma Scars**
-
- **Pore Clearance**
- **Ingrown Hairs**
- **Hyperpigmentation**

Diamonds. The Difference is in the Cut

The ultimate microdermabrasion tool, Pristine diamond tips introduce a level of precision not found in traditional crystal-based treatments. Special care is taken to produce quality diamond tips that gently exfoliate the skin without cutting or scratching. True laser cut, high quality diamond tips ensure 100% accuracy that lasts over time.

Luxuriate in the Pristine Silence of the Perfect Aesthetic Treatment

Diamond treatments are hygienic and do not pollute the skin or environment. 13 different tips, more than any other in the market, greatly expand treatment choices. Covering the full scope of aesthetic options, Pristine allows you to offer treatments that range from a quick refreshing facial to safe whitehead and blackhead removal to a full body exfoliation.

Pristine is the single most cost effective addition to your aesthetic practice. Guaranteed.

- **Safe and Hygienic:** Crystal-free, Pristine`s microdermabrasion diamond peel protects the client and physician from the potential respiratory and ingestion hazards of crystal irritants.
- **Reusable:** Diamond tips rarely need replacing and can be safely sterilized in an autoclave.
- **Wide variety of tip sizes:** Specific tips for each application enable highly accurate results and offer the most extensive choice of treatment options available. Tips range from 5 to 20mm in diameter with coarseness grades of 25 - 500 microns.
- **Diamond tips can be used to treat nearly any part of the body and enable more aggressive treatment on sensitive skin.**
- **Fast:** Pristine treatments can be performed up to 100% faster than traditional microdermabrasion depending on body site. Full face in under 10 minutes. . Fully Adjustable Suction Feature: Ensures even peels and comfortable treatments.
- **Powerful Motor:** Strong and silent, the Pristine motor reaches up to 1 bar yet remains quiet for a more relaxing environment.

Microdermabrasion

involves partially or completely removing the stratum corneum using a light abrasive technique. The more traditional crystal method sprays the skin with a fine layer of aluminum oxide crystals while newer methods use precision diamond tips. Both methods are safe, effective, and less expensive than either surgical or chemical peel options. In addition, the microdermabrasion procedure is fast, simple and painless.

Anti-Aging Skin Rejuvenation

While exfoliation was initially believed to be the source of the long-term benefits, recent research now indicates that suction is the mechanism that reorganizes collagen to fill in fine lines and improve texture and elasticity.

Acne (blackheads and whiteheads) and trauma scars

The removal of dead layers of skin helps clean pores and lowers the risk of future breakouts. Exfoliating the top layers also reduces the appearance of scar tissue and smoothes skin.

Pore Clearance (enlarged pores and blemishes)

Suction increases blood flow and brings impurities to the surface for removal. Abrading the skin simultaneously clears away upper layers to prevent blocked pores and oily buildup.

Ingrown hairs

Removing surface layers helps clear ingrown hairs by releasing the hair trapped under the skin and reducing the inflammatory response.

Hyperpigmentation

The gentle exfoliation of skin accelerates the growth of new skin cells that evens skin tone and creates a fresher, more revitalized look.
